Identify user needs and requirements.

3. Design
Plan the solution, create system and design.

4. Implementation
Develop and build the system according to design.

5. Testing
Verify and validate the system.

REQUIREMENT ANALYSIS

- Identifies user needs and system requirements.
- Helps in clear understanding of what the system should achieve.

BENEFITS

- Improves software
- Reduces errors
- Ensures success

TESTING

Verifies whether the implemented system meets the specified requirements.

GOAL

Deliver a high quality software solution meets needs
